The Impact of Asphalt Sustainability

About 9.3M scrap tires were used to make quiet, rubberized asphalt pavements.2

About 1.4M tons of roofing shingles were put to use in new pavement mixes and other road-building uses.1

Reuse of old pavements saves 15,030 Olympic-size pools worth of landfill space.1

76.9M tons of old pavements were put to use in new pavement mixes and other road-building activities.

99%+ of the material removed from old asphalt pavements is reused in new pavements!

$2.1B+ savings from recycled materials compared to the cost of raw materials.3

WARM-MIX ASPHALT technologies have the benefit of reducing energy consumption which decreases the production of greenhouse gases.1,3

31%+ Nearly a third of all asphalt pavement mixtures are produced using warm-mix technologies1
