

<p>Name of Test Disc-Shaped Compact Tension Test</p>	<p>Developer(s) Buttlar and co-workers University of Illinois at Urbana-Champaign</p>								
<p>Test Method(s) ASTM D7313-13</p>	<p>Adoption by Agencies Iowa</p>								
<p>Description The DCT test is performed under tensile loading and the crack mouth opening displacement (CMOD) is measured with a clip-on gage at the crack mouth. After temperature conditioning, specimens are inserted in loading fixtures, subjected to a preload no greater than 0.2 kN, and then tested with a constant CMOD of 1 mm/min. The test is completed when the post peak level reduces to 0.1 kN.</p>	<p>Photographs/Illustrations</p> 								
<p>Test Results Fracture energy</p>	<p>Test Temperature(s) PG low temperature limit + 10°C (ASTM)</p>								
<p>Equipment & Approximate Cost</p> <table border="0"> <tr> <td>Stand-alone DCT test system</td> <td>\$50,000</td> </tr> <tr> <td>Core drill</td> <td>\$3,000</td> </tr> <tr> <td>Saw for cutting specimens</td> <td>\$6,000</td> </tr> <tr> <td>Saw for notching specimens</td> <td>\$1,000</td> </tr> </table>		Stand-alone DCT test system	\$50,000	Core drill	\$3,000	Saw for cutting specimens	\$6,000	Saw for notching specimens	\$1,000
Stand-alone DCT test system	\$50,000								
Core drill	\$3,000								
Saw for cutting specimens	\$6,000								
Saw for notching specimens	\$1,000								
<p>Specimen Fabrication Cylinder specimen, 3 cuts, 1 notch, 2 holes, gluing gauge points (4 hours)</p>	<p>Number of Replicate Specimens Not specified. Minimum 4 (NCAT)</p>								
<p>Specimen Conditioning Conditioning for 8 to 16 hours at the desired test temperature</p>	<p>Testing Time 30 Minutes</p>								
<p>Data Analysis Complexity Simple</p>	<p>Test Variability Low (10-15% COV)</p>								
<p>Field Validations Good (pavement sections in New York, Iowa, Illinois, and on UIUC-ATLAS APT and MnROAD)</p>	<p>Overall Practicality for Mix Design and QA Good for Mix Design Poor for QA</p>
